Problem 1: Consider below a C++ function `float kahan(float num1, float num2, float& compensation)` that implements the *Kahan Summation Algorithm* for high-precision compensated summation of two float arguments `float num1` and `float num2`:

```
float kahan(float num1, float num2, float &compensation)
{
    float result;
    num2 -= compensation;
    result = num1 + num2;
    compensation = (result - num1) - num2;
    return result;
}
```

Using this function, write a C++ function `float pi(int n)` that computes the value  $\pi$  by the following formula:

$$\pi = 2 \sum_{k=0}^n \frac{(2k-1)!!}{(2k)!!(2k+1)} = \frac{2}{1*1} + \frac{1}{2} * \frac{2}{3} + \frac{1*3}{2*4} * \frac{2}{5} + \frac{1*3*5}{2*4*6} * \frac{2}{7} + \dots$$

Recall that  $n!!$  is the product of odd numbers from 1 to  $n$ , if  $n$  is odd; and is the product of even numbers from 2 to  $n$ , if  $n$  is even. The double factorial of non-positive numbers equals to 1 by definition.

The initial value of `float compensation` is 0.0.

*float pi(int n)*

Use the backside, if needed

Problem 1 of 4

OOP.MT.170317.M069

using namespace std;

int number\_of\_lines = 0;

void number\_of\_lines();

int main() {

string line;

ifstream my\_file("textexample.txt");

if (my\_file.is\_open()) {

while (!my\_file.eof()) {

getline(my\_file, line);

cout << line << endl;

number\_of\_lines++; }

my\_file.close(); }

number\_of\_lines(); }

void number\_of\_lines() {

number\_of\_lines = 0;

cout << "Number of lines in text file: " << number\_of\_lines << endl;

}

2

**Problem 3:** Write a Java function `public static double area(double[][] vertex)` that takes as its argument a 2-by-n array of a convex polygon's vertex coordinates `double[][] vertex` - the x coordinates in the first row and y coordinates in the second row. It returns polygon's area as follows:

1. Divides the polygon into triangles by connecting the **first** vertex with the  $n^{th}$  and  $(n+1)^{th}$  vertices;
2. Adds the areas of the constructed triangles using the formula  $area = \sqrt{p(p-a)(p-b)(p-c)}$ , where  $a, b$  and  $c$  are the sides and  $p = (a + b + c) / 2$ .

You may assume and use a method `double dist(double x1, double y1, double x2, double y2)` that takes as its arguments coordinates of two points and returns the distance between them.

```
public class WidthLengthAreaMethods {
    public static void main (String[] args) {
        Scanner keyboard = new Scanner (System.in);

        double length;
        double width;
        double area;

        length = getLength();
        width = getWidth();
        area = getArea (double length, double width);
        displayData (length, width, area);

        public static double getLength() {
            System.out.println ("Enter length. ");
            length = keyboard.nextDouble();
            System.out.println ("The length is " + length);
        }

        public static double getWidth() {
            System.out.println ("Enter width. ");
            width = keyboard.nextDouble();
            System.out.println ("The width is " + width);
        }

        public static double getArea() {
            double length;
            double width;
            double area = length * width;
            System.out.println ("The area is " + area);
        }
    }
}
```

OOP-MT-140317-M069

Use the backside, if needed

```
System.out.println ("The area is " + area); }
public static void displayData (double length, double width, double area) {
    System.out.println ("The length is " + length);
    System.out.println ("The width is " + width);
    System.out.println ("The area is " + area); } }
```

Section, Name and ID#:

**Problem 4:** Write a Java method `public static void magic4N(int[][] square)` that creates a magic square of a  $4N$ -by- $4N$  size using the following algorithm:

1. Creates an array of the same size as `int[][] square` and fills it forward with successive integers assigning 1 to the top-left element;
2. Creates another array of the same size as `int[][] square` and fills it backward with successive integers assigning 1 to the bottom-right element;
3. Divides the original `int[][] square` into 16 blocks of the same size – 4 blocks per row and column. In the on-diagonal (shaded) blocks copies the elements from the first array, and in the off-diagonal blocks copies the elements from second array.

<http://stackoverflow.com/questions/25921902/2d-array-diagonally-filling/25922001>

```

public static void main (String[] args)
// create an M x N array
int rows = 4;
int columns = 4;
int [][] testData = new int[rows][columns];
// iteratively add numbers
int counter = 0;
for (int i = 0; i < rows; i++) {
    for (int j = 0; j < columns; j++) {
        testData[i][j] = ++counter;
    }
}
// print our test array
printArray(testData);
System.out.println("");
// print

```

Problem 4 of 4

OOP.MT. 140317.M069

```
int[][][] convertToDiagonal(int[][] input) {
```

```
    int[][] output = new int[input.length][input.length];
```

```
    int i = 0, j = 0; // i count rows, j count columns
```

```
    int n = input.length;
```

```
    for (int slice = 0, slice < 2 * n - 1; slice += 1) {
```

```
        for (int k = 2, k <= slice - 2; k += 1) { // store slice value in current row
```

```
            output[i][j++] = input[k][slice - k];
```

```
        }
```

```
        // if we reached end of row, reset column counter,
```

```
        if (j == n) {
```

```
            j = 0;
```

```
            i++;
```

```
        }
```

```
    }
```

```
    return output;
```

---

```
for (int k = 0; k < dim; k++) { // loop extract top half of diagonals
```

```
    for (int j = 0; j <= k; j++) {
```

```
        int i = k - j;
```

```
        System.out.print(array[i][j] + " ");
```

```
    }
```

```
    System.out.println();
```

```
    }
```

// Hereafter on bottom half of diagonals

```
for (int k = dim - 2; k >= 0; k--) {
```

```
    for (int j = 0; j <= k; j++) {
```

```
        int i = k - j;
```

```
        System.out.print(array[dim - j - 1][dim - i - 1] + " ");
```

```
    }
```

```
    System.out.println();
```

```
    }
```
